RISING SENIOR

Rising Senior System Overview

A structured college-to-career workspace that helps students, families, and coaches move from scattered concern to clearer action.

Generated April 26, 2026 | General stakeholder overview | Whole-system summary

WHAT THIS BRIEF COVERS

Rising Senior is designed for the period when academic progress, employability, timing, family communication, and job targeting all begin to collide.

In the current product, students, parents, coaches, and administrators work inside role-aware spaces tied to the same underlying student record. The platform combines profile context, academic evidence, curriculum review, Career Goal analysis, communication tools, and dashboard guidance without pretending weak evidence is final truth.

The result is a more coordinated place to understand what is known, what still needs verification, and what the next practical move should be before graduation pressure turns into avoidable confusion.

AT A GLANCE

Core product threads

- Student profile, academic path, and optional guidance preferences
- Academic evidence plus curriculum and degree requirement verification
- Career Goal scenarios with saved comparisons and re-runs
- Transparent readiness scoring with evidence-quality context
- Parent, student, and coach communication support
- Role-aware dashboards, alerts, and next-step visibility

PROBLEM DEFINITION

Why families and students lose momentum

Senior-year planning often breaks apart across too many disconnected tools and

HOW THE SYSTEM WORKS

One workspace that connects evidence, goals, and action

Rising Senior uses a household and role-aware model: parents create households, students

conversations. A student may have a major, a transcript, a resume, a few job ideas, and a growing sense of urgency, but still no unified picture of employability.

Parents can feel concern without having visibility. Coaches may see parts of the picture but not the full academic or family context. That fragmentation creates stress, poor timing, repeated misunderstandings, and missed chances to close gaps while there is still time.

- Students often approach senior year without a clear employment-readiness plan.
- Career evidence is scattered across school records, files, projects, and informal updates.
- Academic requirements, job targets, communication patterns, and next actions are rarely held together in one place.

and coaches join through invitation or approved access, and each workspace exposes only the features a role is allowed to use.

Inside that structure, the system connects student profile data, institution and program selection, academic evidence, degree requirement review, Career Goal scenarios, scoring, recommendations, communication context, and dashboard alerts.

WHAT MAKES THIS CREDIBLE

The platform distinguishes direct evidence, inferred material, fallback data, and unresolved gaps so weak information does not quietly look stronger than it is.

ACADEMIC LAYER

Academic path and curriculum review are part of readiness

The academic path flow anchors school, catalog, program, major, minor, and concentration context. Academic evidence cards then show whether offerings were discovered cleanly, whether degree requirements were found, and whether curriculum has been visually verified.

When school websites are incomplete, the system supports manual recovery and program PDF upload. That means readiness guidance

CAREER LAYER

Career Goal turns broad planning into target-specific analysis

Career Goal lets a user save named job-target scenarios, paste a real job description, compare multiple paths, set one scenario active, and re-run analysis after evidence changes.

That job-specific frame feeds the dashboards with more targeted strengths, likely gaps, missing evidence, and action ideas without overwriting the student's baseline record.

can stay tied to real degree progress instead of generic assumptions.

COMMUNICATION LAYER

Communication support is built in, not bolted on

The Communication workspace collects parent insight, student preferences, translation history, inferred communication patterns, and role-aware summaries. Parents can soften a concern before sending it. Students can say what tone, reminder style, or topics tend to help or backfire. Coaches can review authorized summaries when support needs to stay calm and useful.

- Prompt-based context collection can happen gradually over time.
- Saved answers can be edited or deleted when circumstances change.
- Visibility controls and consent boundaries shape what another person may see directly.

INTENDED OUTCOMES

What better coordination is meant to produce

- A clearer readiness picture before graduation deadlines compress.
- Earlier identification of missing evidence, unverified curriculum, and role-specific gaps.
- More actionable next steps instead of vague pressure.
- Better parent-student alignment and lower-friction communication.
- Stronger confidence about progress toward satisfying employment and independent adult life.

Prepared from the current Rising Senior product flows, help content, navigation, and role-aware dashboards.

From scattered concern to coordinated launch plan

How Rising Senior connects evidence, interpretation, guided action, and better outcomes.

Inputs

What the platform gathers

- Student information
- Academic evidence
- Curriculum requirements
- Job descriptions
- Parent insight
- Coach notes

System Intelligence

What the workspace interprets

- Profile context
- Readiness analysis
- Scenario comparison
- Communication translation
- Alerts

Guided Actions

What users can do next

- Recommendations
- Dashboard next steps
- Communication support
- Curriculum verification
- Career Goal updates

Outcomes

What improves over time

- Better visibility
- Better decisions
- Less friction
- Improved employability
- Stronger launch readiness

Platform promise

Move the student, family, and coach from scattered concern toward a more factual, role-aware launch plan.

Why this matters

The audited product flows show a system built to combine school context, job targeting, evidence quality, and family communication instead of treating them as separate problems.

How to read it

Inputs become more useful when they are verified, translated into context, and turned into a smaller set of practical next moves.

CLOSING THOUGHT

Rising Senior is strongest when it reduces uncertainty without pretending uncertainty is gone.

The platform does not replace student ownership, parent care, or coach judgment. It gives those relationships a steadier, more evidence-aware place to work.

That is what makes the system valuable for students preparing to launch, families trying to help well, and early partners looking for a credible readiness workflow.
